Specialty Refurbishment

New & Refurbished Bellows

CSS, Inc. specializes in the production of hydro-formed and welded bellows assemblies for the semiconductor industry. Whether basic or complex we can meet your application needs.

Leaking bellows sections can usually be repaired to cut down the overall cost of replacing entire assemblies.

We also provide refurbishment history tracking that helps predict failure expectations and the overall operating cost of your equipment. Below you will find some of the OEM's that we are supplying and servicing.
